### **HOW TO PLANT DAHLIA SEED:**

Use flats three inches deep. Put a full inch of sand in bottom of flats. Cover this with one inch of good potting soil. Pack down well. Plant the seed. Then cover seed with a mixture of leaf mould or peat moss and sand one-quarter inch deep, and put a burlap frame over the seed to prevent it drying out. Don't water heavily and don't allow to dry out. Keep flats in a warm, shady place. When 3 or 4 inches high they should be transplanted into flats or pots. Please remember when setting out seedlings, always plant them deeper than they grew in pots.
